Splash Screen

A native Android introduction that animates a project logo, waits for 2.2 seconds of foreground time, and opens a welcome screen.

Assignment coverage

Logo and animation - XML layout with an original project mark and a 700 ms fade/scale animation.

Delay and lifecycle - Handler schedules navigation; onPause removes callbacks and retains the remaining delay. onResume resumes it; onDestroy cleans up.

Intent navigation - An explicit Intent opens MainActivity. Finishing the splash prevents Back from replaying it.

Run and review

Open the repository root in Android Studio. Install SDK 35 and Build Tools 35.0.0; use JDK 17 or 21. Sync Gradle, then run the splash module on Android 8.0 / API 26 or later.

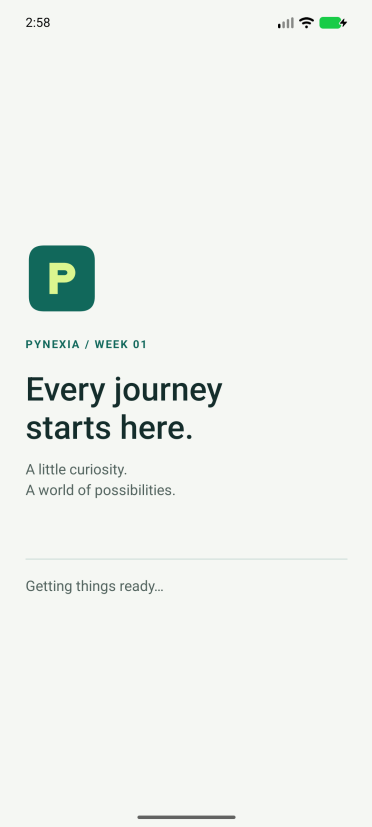

1. Launch the app and watch the logo animate.
2. After approximately 2.2 seconds in the foreground, confirm the welcome screen appears.
3. Relaunch, background the app during the introduction, then return. The remaining delay resumes.
4. Press Back from the welcome screen: the introduction should not reappear.

Scope

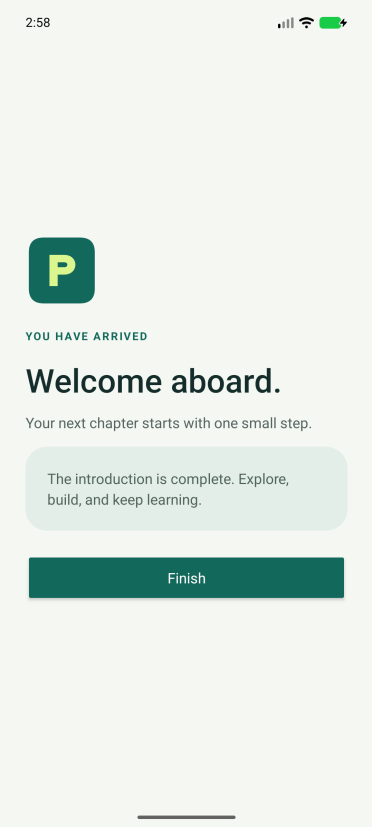

Android 12+ also shows its system launch splash before this assignment's introductory Activity. The logo is a learning-project mark, not an official Pynexia asset.

Actual app screens

Captured from the tested native Android application, not browser mockups.

Animated introduction

Welcome screen

Executed checks

JVM tests passed: 0 | Device tests passed: 2 | Lint errors: 0 | Lint warnings: 7

Two device tests cover automatic navigation, disposal of the introductory Activity, and pausing navigation while backgrounded. There are no separate JVM tests for this UI-only exercise.

Debug APK built and signature verified. Tests ran on a Pixel 8 emulator, Android 17 / API 37 (37.1 image), x86_64. Zero test failures, errors or skips. No physical-device or API 26 execution. Lint warnings are retained without suppression; inspect verification/ for the findings.

Reproduce

.\gradlew.bat :splash:assembleDebug :splash:testDebugUnitTest :splash:lintDebug

.\gradlew.bat :splash:connectedDebugAndroidTest

The second command requires a running emulator or connected device. APKs are debug-signed evaluation builds.

Explanation & submission

يعرض التمرين شاشة افتتاحية تحتوي على شعار وحركة بسيطة، ثم ينتقل تلقائيا إلى الشاشة الرئيسية. يتوقف عداد الانتظار عند خروج التطبيق إلى الخلفية ويستكمل المدة المتبقية عند العودة. تنتهي الشاشة الافتتاحية بعد الانتقال حتى لا تظهر مجددا عند الضغط على زر الرجوع.

للتجربة: افتح التطبيق وانتظر الانتقال التلقائي، ثم أعد تشغيله واخرج إلى الخلفية قبل انتهاء المقدمة وعد إليه للتحقق من استكمال الانتظار.

Hosted project showcase with real screenshots and APK/PDF downloads. It is not an in-browser Android emulator.

Attach File / Archive

Splash-Screen-App.zip - includes source, APK, screenshots, verification and this report; below the 10 MB limit. PDF may also be attached separately. APK is inside the ZIP because the supplied form does not list APK as a direct attachment type.

Notes / Implementation Remarks (1221 / 2000 characters)

Native Android Splash Screen App built with Java and XML. The branded introduction includes a logo fade/scale animation and a 2.2-second foreground delay implemented with Handler. An explicit Intent opens MainActivity, and the splash Activity finishes to prevent returning to it with Back. The delay pauses in the background and callbacks are removed during Activity cleanup.

Run: open the source folder in Android Studio, sync Gradle, and run the splash module. Requires Android 8.0/API 26 or later; compile/target SDK 35. Launch the app to see the automatic transition. Background the app during the introduction and return to verify lifecycle handling.

Validation: debug APK built successfully; 2 Android instrumentation tests passed on a Pixel 8 emulator (Android 17/API 37). Android Lint completed with zero errors; non-blocking warnings are documented. Source code, Gradle Wrapper, APK, screenshots and verification reports are included in the attached ZIP. Android 12+ also displays its system launch splash before the assignment's introductory Activity.

Hosted URL: project showcase with actual screenshots and APK/PDF downloads; not a browser emulator. The ZIP also includes a bilingual implementation report.
